

## Practical Applications in CS I - Session 03.01

jFrameForm class variables

```
Connection con = null;  
Statement stmt = null;  
ResultSet rs = null;
```

DoConnect

```
try {  
    String uName = "root";  
    String uPass = "root";  
    String db = "jdbc:mysql://localhost:3306/CSITResults";  
    con = DriverManager.getConnection(db, uName, uPass);  
    stmt = con.createStatement(ResultSet.TYPE_SCROLL_SENSITIVE,  
        ResultSet.CONCUR_UPDATABLE);  
    String SQL = "SELECT * FROM CSIT12Results";  
    rs = stmt.executeQuery(SQL);  
    rs.next();  
  
} catch (SQLException err) {  
    JOptionPane.showMessageDialog(this, err.getMessage());  
}
```
